

The Wet Cell Phone Emergency Kit is first aid for wet electronics.

When a cell phone gets soaked most cell phone insurances do not cover water damage. So what are you suppose to do if you end up with a wet cell phone?

Now you can save your soaked phone or small electronic item with new technology from DRY-ALL. This product absorbs all of the moisture in the wet phone quickly, allowing the phone to continue working as normal without losing your contacts, applications, pictures, or music.

The Wet Cell Phone Emergency Kit is guaranteed to dry all types of cell phones that have been exposed to any type of moisture. DRY-ALL president Sean Gutierrez works hard to ensure that they only produce quality products. "We believe people deserve a professional product that actually does what it says it is going to do. Here at DRY-ALL we take pride in making a product that works."

The Wet Cell Phone Emergency Kit, much like a medical emergency kit, is a good idea to have on hand in case of a wet cell phone emergency. They boast a 100% success rate when all of the products' directions are followed. At that rate of success why not have one for emergencies; this would also make a great stocking stuffer for the accident prone people in your life.

"The Wet Cellular Phone Emergency Kit has an unbeatable success rate. We have also saved iPods, Nintendo DSs, and PSPs," says Aime Gutierrez who is in charge of sales and marketing for DRY-ALL. "Water and electronics do not mix yet they somehow always end up together in a potentially deadly situation for your personal electronics. This makes our product something that everyone will need at some point." They have created this product that is now available for purchase; it is called the Wet Cellular Phone Emergency Kit. Their website is www.dry-all.com

HPL, LLC. headquartered in Gilbert AZ, manufactures high quality indicating dehumidifiers. Their product was originally used to protect moisture sensitive military equipment. It has been used to keep gun safes dry and for daily moisture removal for hearing aids. It is now used for drying wet cell phones, wet iPods, and other electronic items.
