

Wet Smartphones can be dried in as little as 6 hours with DRY-ALLs new product launching at 2011 CES show.

What is the worth of your Smartphone? Pretty high when you take into account all it does for you! Smartphones hold all of your contacts, give you instant access to information, provide you with a feeling of safety and security, and they are the number one way we communicate with each other. What do you do if your Smartphone ends up getting soaked?

Now you can save your wet Smartphone with new technology from DRY-ALL. This product absorbs all of the moisture in your phone quickly, allowing your phone to continue working as normal without losing all of your valuable information.

This new kit has hyperfast dry time and a patent pending absorption chamber that dries wet cell phones in as little as 6 hours. Using DRY-ALLs proprietary blue bead technology™ you can use one Smartphone Emergency Kit to dry multiple phones for thousands of dollars in savings.

The Wet Smartphone Emergency Kit is guaranteed to dry all types of Smartphones and iPhones that have been exposed to any type of moisture. DRY-ALL president Sean Gutierrez works hard to ensure that they only produce quality products. "We believe people deserve a professional product that actually does what it says it is going to do. Here at DRY-ALL we take pride in making a product that works."

The Wet Smartphone Emergency Kit, much like a medical emergency kit, is a good idea to have on hand in case of a wet cell phone emergency. They boast a 100% success rate when all of the products' directions are followed.

"The Wet Smartphone Emergency Kit has an unbeatable success rate," says Aime Gutierrez who is in charge of sales and marketing for DRY-ALL. "Water and electronics do not mix yet they somehow always end up together in a potentially deadly situation for your personal electronics. This makes our product something that everyone will need at some point." They have created this product that is launching at this year's 2011 CES show in Las Vegas. Their website is www.dry-all.com

HPL, LLC. Headquartered in Gilbert AZ, manufactures high quality dehumidifiers with proprietary blue bead technology™. Their product was originally used to protect moisture sensitive military equipment. It is now used for drying wet electronic items.
